Heyrod Projects

Lightning Protection and Specialist Access Solutions

Lightning Protection

Are you protected from damage caused by Lightning Strikes?

At Heyrod we understand the complex nature of earthing and lightning protection. Change is fast upon us with the arrival of the new IEC standards. We are committed and are fully prepared for this.

By working closely in partnership with many large earthing and lightning protection manufacturers we have developed key solutions to meet the needs of the standards and ultimately you our customer.

We offer a complete range of services relating to all aspects of earthing and lightning protection in accordance with British, European **and** International standards.

Consultancy and evaluation
Survey and evaluation of existing systems with technical reports.

Design
New system and existing system upgrades.

Lightning protection
Full system installation and annual maintenance service.

Earthing
Soil testing and surveys, full system installation and maintenance.

Transient surge protection
Protection for communications equipment, data, signal and IT systems.

Inspection, testing and verification
Maintenance and strike inspections, testing of existing, altered and new systems.

Specialist Access Solutions

At Heyrod we can offer a wide and unique range of services associated with working at heights or in awkward locations.

Access solutions used include rope acces, scaffolding and mobile platforms to meet the demands of the most challenging working environments:

Fall arrest systems

Rope grabs, fall arrest blocks, anchorage points, channel/wire rail systems, safety netting.

Steelwork and cladding fabrication and installation

Design, fabrication and installation of access laddering systems, support beams, gantries, walkways and cladding.

Proof load anchor testing

Safety eyebolts and ladder restraint ties, design load calculations, anchorage points, bracketry and support points

Rooftop safety installations

Survey, design, manufacture and installation of edge protection systems, fall arrest and safety eyebolts

Specialist repair and refurbishment

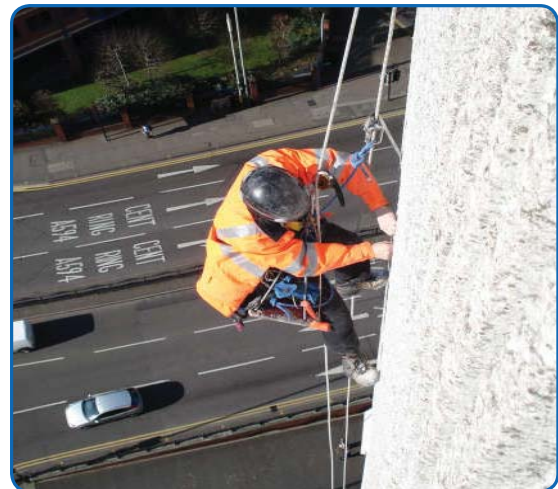

Reconstruction and refurbishment of masonry and cladding, bridges, water towers, leadwork and flashings, industrial chimneys

High level maintenance and cleaning

High level cleaning and painting, flagpole, gutter and downpipe maintenance, industrial chimneys, stadiums

High level inspection

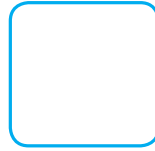

Video inspections, tower, mast and guide rope inspection, stadium and bridge surveys, corrosion surveys, gutter and window inspection

conducting excellence

Taking health and safety seriously

We take Health and Safety seriously. This means that all our staff are kept fully trained and given the appropriate guidance. That we keep ourselves updated with all aspects of Health and Safety legislation. That we have a close working relationship with the Health and Safety Executive. And that we are proud to be accredited to the Contractors Health and Safety Scheme (CHAS).

We also operate a generic safety strategy, from which we develop a detailed Project Health and Safety Plan. This includes site and task specific safety requirements, with our teams inducted by the site Project Manager before we start work.

Finally, random external audits supplement the project management team's Health and Safety checks.

We also outline the need to stick to the company's overall Health and Safety obligations in our Quality Management System and in our Health and Safety Policy. These documents make staff induction on the subject obligatory, and this is delivered by our external consultant, Britannia MCD.

On many projects, we are required to be Principal Contractor under CDM regulations. Here, we work with the appointed planning supervisor to create a safe working environment for all concerned.

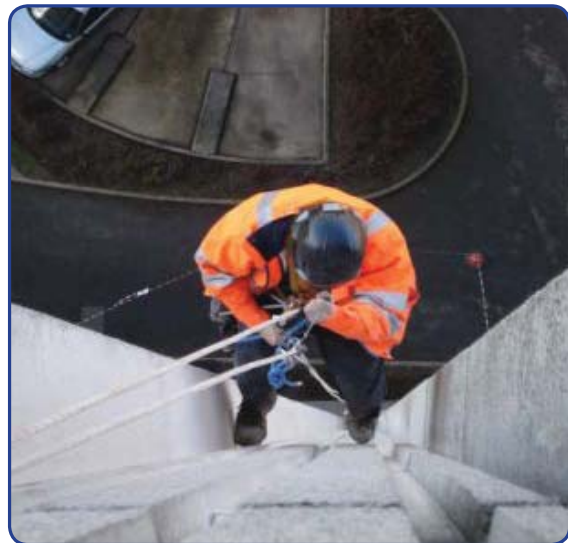

Quality and Accreditations

Quality is the cornerstone of everything we do. All our working practices, and technical and administrative procedures, fall under our Business Quality Management System (BQMS).

This meets the requirements of BS EN ISO 9001 and 14001 Quality and Environmental standards with accreditation achieved under the control of ISOQAR QA certificate No. 4337/04.

ISOQAR audits the system twice-yearly and we continually examine it to ensure the continuous improvement of our services and working practices, maintaining a high-quality service for you.

We are also an NICEIC (Commercial and Domestic) approved contractor, are accredited to the Contractors Health and Safety Scheme and are an Investors in People organisation.
